Technical Bulletin

The pump body casting for A470, A670 Chrysler Lockup transmissions changed in 1989. Chrysler A470, A670 converters will rub against the transmission oil pump housing if an "early" style (974) converter is installed with a "late" 1989-up pump body.

The late style converter (974A, 975, 975A) measures .950" from the top of the pump hub to the top of the primary lid and will not rub against the late pump body. Late style converters will retro back to replace early style converters; just match the stall speed and they will interchange with no problems.
